

CFP: 5th International Conference on Hybrid Intelligent Systems (HIS'05)

November 06-09, 2005

Rio de Janeiro, Brazil

Conference URL: <http://his05.hybridsystem.com>

Mirror Site: <http://www.ica.ele.puc-rio.br/his05>

\*\*\*\*\*

Deadline for Paper Submission: July 1st, 2005

\*\*\*\*\*

HIS'05 is technically co-sponsored by:

- IEEE Systems Man and Cybernetics Society
- International Fuzzy Systems Association (IFSA)
- European Neural Network Society (ENNS)
- European Society for Fuzzy

# Logic and Technology (EUSFLAT)

- The World Federation on  
Soft Computing

- Brazilian Computing  
Society (SBC)

- Brazilian Society for  
Automation (SBA)

HIS'05 is organized in  
cooperation with:

- IEEE-

Computational  
Intelligence Society

Hybridization of  
intelligent systems  
is a promising  
research field of  
computational  
intelligence  
focusing on

synergistic  
combinations of  
multiple  
approaches to  
develop the next  
generation of  
intelligent systems.  
A fundamental  
stimulus to the

investigations of  
Hybrid Intelligent  
Systems (HIS) is  
the awareness that  
combined  
approaches

will be necessary if the remaining tough problems in artificial intelligence are to be solved. Neural computing, machine learning, fuzzy logic,

evolutionary  
algorithms,  
agent-based  
methods, among  
others, have been  
established and  
shown their  
strength and  
drawbacks.

Recently, hybrid intelligent systems are getting popular due to their capabilities in

handling several  
real world  
complexities  
involving  
imprecision,  
uncertainty and  
vagueness.

HIS'05 builds on  
the success of

previous HIS  
events: HIS'04  
was held in Kita  
kyushu, Japan,  
HIS'03 in  
Melbourne,  
Australia, HIS'02  
in Santiago,

Chile, and  
HIS'01, the first  
event, in

Adelaide,  
Australia. All  
events attracted  
participants from

over 30  
countries. HIS'05  
is, therefore, the  
fifth International  
Conference that  
brings together  
researchers,  
developers,

practitioners, and  
users of soft  
computing,  
computational  
intelligence,  
multi-agents, and  
several other  
intelligent

computing  
techniques.

The objectives of  
this

international  
meeting are to  
increase the  
awareness of  
the research  
community of  
the broad  
spectrum of

hybrid  
techniques, to  
bring together  
AI researchers  
from around the  
world to present  
their  
cutting-edge

results, to  
discuss the  
current trends in  
HIS research, to  
develop a  
collective vision  
of future  
opportunities, to

establish  
international  
collaborative  
opportunities,  
and as a result  
to advance the  
state of the art  
of the field.

# HIS'05 invites

authors to  
submit original  
and  
unpublished  
work that  
demonstrates  
current

research in  
hybrid  
intelligent  
systems  
research and  
their  
applications in

science,  
technology,  
business and  
commerce.  
Submitted  
papers have to  
be original,

containing new  
and original

results. The  
assessment

criteria will be  
heavily  
weighted  
towards  
originality,  
potential  
impact and

relevance to  
HIS'05  
themes. All  
papers will be  
peer reviewed  
by three  
independent

referees of the  
international  
program  
committee of  
HIS'05.

HIS'05 will  
focus on the  
following  
topics:

**\*\* Theoretical**

# Advances in Hybrid Intelligent System Architectures

# \* Interactions between neural networks and fuzzy inference

# systems

\* Hybrid  
learning

techniques  
(supervised/  
unsupervised/  
reinforcement learning)

# \* Artificial neural network optimization

# using global optimization techniques

\* Fuzzy  
inference  
system  
optimization  
using global

# optimization algorithms

# \* Hybrid systems involving support vector

machines,  
rough sets,  
Bayesian  
networks,  
probabilistic

reasoning,  
minimum  
message  
length, etc.

# \* Hybri d computing

using  
neural  
networks -  
fuzzy  
systems -

# evolutionar y algorithms

# \* Hybri d optimizatio n techniques

(evolutionary  
algorithms,  
simulated  
annealing,

tabu  
search,  
GRASP  
etc.)

# \* Hybri d of soft computing

and  
statistical  
learning  
techniques

# \* Integ ration with Intelligent

agents  
(architectu  
res,  
environme  
nts,

adaptation  
/learning  
and  
knowledg  
e

managem  
ent)

# \* Hybr id models using inductive logic

programm  
ing, logic  
synthesis,  
grammati  
cal

inference,  
case-based  
reasoning  
etc.
